It is the discovery of who we really are. I

have since discovered that leg movements in sleep are common experiences. They are normal spasms that occur just before we fall asleep. However, there are other disruptive leg movements that are symptoms of sleep disorder syndromes.

People with Periodic Limb Movement Disorder, for example, are wakened by involuntary rhythmic movements of the limbs during sleep. Sometimes these take the form of twitching in toes and ankles; other times, they involve more flailing and exaggerated movements of the arms and legs. But the movements come in clusters, some lasting a few minutes, others more than an hour. In effect, the movements are jerky and persistent enough to disrupt sleep and cause sleep deprivation. Pueraria mirifica has long been traditionally equipped in the form of pills for oral intake. Currently, the dried pueraria mirifica roots are thinly ground, sometimes mixed with other medical plants, packed in capsules and marketed as food supplement; however, for some distributors, the pueraria mirifica capsules are equipped from the ransack extract. The formulation that includes ingredient slant and satisfied of each ingredient varies from one supplier to another. Make everyone aware if you have a life-threatening allergy.
